

CD Xt Signature

An audiophile CD transport using advanced disc reading technology

Product Information:

Recognised by thirty years of awards and accolades, Cyrus consistently pushes the boundaries of audio technology. We're tirelessly working towards the ultimate hi-fi system, which will reproduce the sound and feeling of a live performance without any interference or loss of detail.

The CD Xt Signature is a dedicated CD transport which produces audiophile sound quality. It is manufactured with a range of performance enhancing techniques and components, including an evolved version of our Servo Evolution technology.

Two separate power supplies provide huge reserves of power, which eliminates the need for a PSX-R₂. The sound produced by the CD Xt Signature is truly stunning, providing a room filling wide and high soundstage.

CD Xt Signature features and benefits

Servo Evolution:

The new SE platform is quite different because it is specifically engineered to retrieve data from an audio CD with the fewest errors. To provide the ideal data output for hi-fi, Cyrus controls the whole electro mechanical servo system to provide much better quality audio than has previously been possible with conventional drives.

Pure Transport Operation:

By removing the onboard DAC, the CD Xt Signature works purely as a digital transport. Removing additional circuitry allows the CD Xt Signature to focus purely on data retrieval and a high performance digital output.

Connectivity:

Optical and coaxial outputs provide connectivity to a variety of DAC's. Our very best digital output stage has been engineered for the CD Xt Signature with signal re-clocking for extremely low jitter.

Precision Slot Loading Drive:

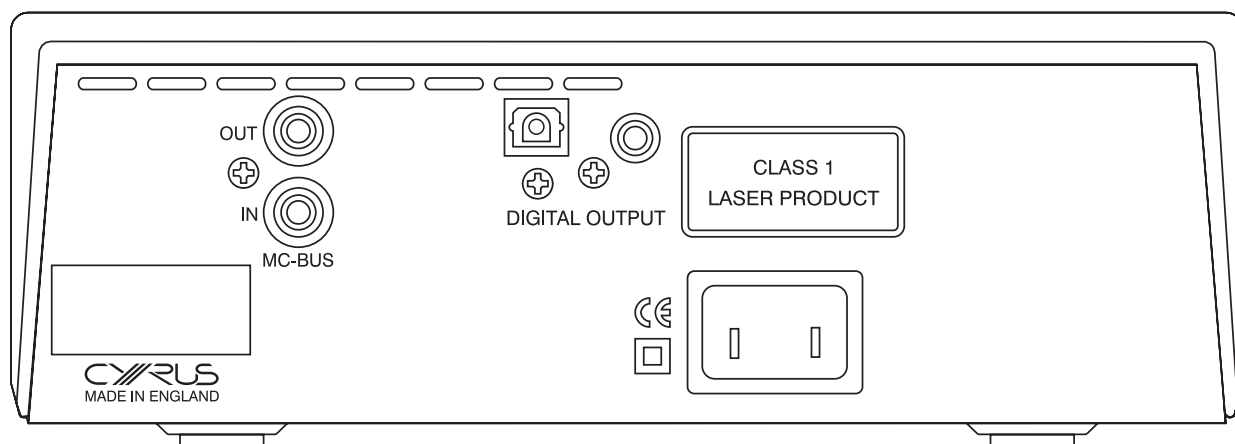

CD Xt Signature features the latest generation of our slot load CD technology. This quiet and low contact mechanism provides myriad benefits to the traditional tray method of loading a CD whilst also de-cluttering the front panel for an improved aesthetic.

Power Supply:

The CD Xt Signature features an over-specified linear power supply which provides isolation for precision parts of the circuit ensuring the most accurate reproduction possible.

Cyrus audio products are designed, manufactured and supported at our headquarters in Cambridgeshire, England.

All Cyrus components are manufactured in an advanced die-cast aluminium chassis and this hand finished casework is an integral part of the products' sound. It's not just about good looks; the chassis composition is specifically designed to create an electronically shielded and mechanically vibration-free environment for the sensitive audio circuits which are hung inside the inverted chassis, avoiding unwanted electric currents and secondary magnetic fields so the sound you hear is the very best that it can be.

Suggested System

CD Xt Signature +
DAC XP Signature + 2 x Mono X 300 Signature

CD Xt Signature Specifications

CD transport

Servo Evolution technology

Signal re-clocking with dedicated PLL for low jitter

Optical and digital output

iR14 Remote control included

Dimensions (H x W x D) – 73 x 215 x 360 mm

Weight – 3.6kg
